

AIR TEMPERATURE AND PRECIPITATION ON THE METEOROLOGICAL STATION BUČNICE IN THE UPPER METUJE CATCHMENT

TREML, P.

TGM Water Research Institute, p. r. i.

Keywords: air temperature – precipitation – daily temperature distribution – annual temperature distribution – daily precipitation distribution – annual precipitation distribution – mass curve method – Bučnice

The paper deals with the analysis of time series of air temperature and precipitation at the meteorological station Bučnice in eastern Bohemia, which is operated by the TGM Water Research Institute. The annual and daily distributions of both variables were assessed, including the analysis of trends. Different types of air temperature extremes were defined based on the way of growth.
