Keywords: sampling – sampler – qualifications

Testing laboratory is responsible for the sampling for the purposes of the Water Act, the Water Supply and Sewerage Act and the Public Health Protection Act. Requirements for the qualification and further training of samplers are defined by the laboratory in its controlled documentation, while in the case of water sampling; the new minimum requirements are set in the standard ČSN EN ISO 5667-14. For the definition of requirements, the laboratory may use the qualification standards for the profession of drinking water sampler and the waste water sampler. The paper describes the reasons for designing new water sampling specialist profession and its qualification standard. At the same time, the documents prepared for health and safety at work for water sampling are presented.
