

MUNICIPAL WASTEWATER AS A DIAGNOSTIC MEDIUM

OCENASKOVA, V.

TGM Water Research Institute, p. r. i.

Keywords: wastewater-based epidemiology – wastewater – alcohol – illicit drugs – pharmaceuticals – nicotine – phthalats – pesticide residues – biomarkers

The paper outlines the possibilities of using the epidemiological approach to the analysis of municipal wastewater to monitor the lifestyle of the population, its dietary habits, the environmental impacts on humans, the assessment of the state of health of the population and monitoring the consumption of illicit drugs and other substances in the monitored population. It aims to draw attention to the need to devote more to this scientific field also in the Czech Republic.
