INFORMATION ABOUT ORAM

SAJER, J.

TGM Water Research Institute, p. r. i., Ostrava Branch

Odra River Alarm Modul (ORAM) will be part of the NAVAROSO project. There are no results of tracer studies of the Czech part of the Odra River in the last twenty years. That´s the reason, why tracer experiment data of the Svitava River were used for analysis. This article is specifically focused on analysis of five breakthroughcurves. The best approximation of the breakthroughcurve in all five cases is given by equation (5) – Pearson distribution type 3. These results should be used by creation of ORAM.
