

HOW TO LEARN THE LEVEL OF LEGAL AND TECHNICAL PRINCIPLES FOR THE APPLICATION OF BLUE INFRASTRUCTURE

VITEK, J.

JV PROJEKT VH, s. r. o.

Keywords: sustainable drainage systems – blue green infrastructure – urban drainage – Operational Programme Environment

The Czech Republic does not sufficiently create the necessary conditions for the conceptual approach to urban drainage based on the principles of a sustainable development. The Ministry of Agriculture of the Czech Republic, responsible for the water management, ignores how much a strict implementation of a sustainable drainage system, especially the blue-green infrastructure, could positively impact urbanized areas' adaptation to climate change. The legal and technical regulations of the Czech civil engineering are in relation to urban drainage nonconceptual and uncoordinated. All responsibility then lies with municipalities that can establish their own guidelines for the application of the blue-green infrastructure.
