Keywords: water tower – water supply –
terminology – documentation – research

The paper presents a summary of input information about the research project Water towers – identification, documentation, presentation, new use. It deals with the development of tower water reservoirs in the present territory of the Czech Republic from the beginning of their creation to the present. The first part of the paper defines the basic terminology of the issue and the object of the research. The second part provides an overview of the bases of research, the provision and overview of the sources of its primary data and also the briefness of the current issue. The third part explains the selected research methods and briefly summarizes the planned outputs.
