

IMPACT OF SNOWMAKING ON STREAMS IN THE GIANT MOUNTAINS

TREML, P.

TGM Water Research Institute, p.r.i.

Keywords: snowmaking — slope — discharge — flow level —
minimum residual flow — snow — water pollution — nature protection

The paper analyses effects of snowmaking on stream flows in the Giant Mountains, detailed analysis of runoff conditions and differences in amount of water contained in technical and natural snow. Attention is paid to possible interaction between water abstraction and water pollution.
