## PROBLEMATICS OF ARCHIVE MAP DATA INTERPRETATION, SPECIFICALLY THE WETLAND HABITATS

**RICHTER, P.**

T. G. Masaryk Water Research Institute

**Key words:** archival maps – wetlands – water retention in the landscape – floodplains of watercourses – ponds

The article presents available on-line archive maps from the websites of the Archive of the Surveying Office and the Geoinformatics Laboratory of the J. E. Purkyně University, that provide an overview of the historical wetland habitats location. The main research question is to find out the potential use of historical maps for the identification of the historical wetlands in the Czech Republic and the evaluation of various interpretations of wetland habitats based on these sources. Examples of wetlands on historical map data in the upper part of the Výrovka River basin are presented.
